## PROFILE

Software Engineer (SDE-2) with **4.5+ years of experience** in a hyper-growth **B2B logistics startup**. Progressed from intern to senior engineer by **building scalable, high-impact systems across multiple products**. Strong focus on **backend, distributed systems**, and **performance optimization**. Passionate about solving complex business problems at scale

## PROFESSIONAL EXPERIENCE

### Senior Software Development Engineer II

04/2025 – Present | Bengaluru

GoComet India Pvt Ltd 📄

**Technical and delivery lead** for the 7-member Platform team behind *GoTrack* — the company's most active product, **contributing 30% of ARR**, serving enterprise clients like **Honda, Unilever, TATA Motors**, and **Apollo Tyres**. Drove **architecture and technical decision-making**, enforced engineering best practices, and ensured **scalable system design**. Contributed to **OKR and product planning**, managed bandwidth and task allocation, and actively **participated in hiring** across Tech Lead and SDE levels through L1 technical interviews.

- **Improved engineering team velocity** by reducing PR review SLAs to **minutes** via process changes (peer reviews, enforced review rotation) and introducing **CodeRabbit** for instant AI-based code reviews.
- Spearheaded **monolith to microservices migration**, starting with test case segregation. Introduced **AI-assisted refactoring workflows in the IDE**, reducing testcase file rewrites from **1–2 hours to ~15 minutes** (*ongoing initiative*).
- **Owned and directed the migration of the Location Mapping Service (v2)** by managing a freelancer and collaborating with product teams; improved **mapping accuracy from 95% to 98%** and **expanded global location coverage by 30%** through algorithmic enhancements, data enrichment, and cleanup — enabling more accurate conversion of location keywords into standard logistics points (ports, airports, cities).
- **Leading the technical collaboration with an external SaaS vendor** to build an MVP for a new platform vertical; currently overseeing technical scoping, milestone planning, and delivery tracking for the initial release phase (*project in progress*).

### Software Development Engineer II

04/2023 – 03/2025 | Bengaluru

GoComet India Pvt Ltd

Actively collaborated with **cross-functional teams**, participated in end-to-end feature development, and took ownership of **design, implementation**, and **performance tuning**. **Reviewed code, HLD/LLDs, mentored junior engineers** to grow task-relevant maturity (TRM), and played a hands-on role in improving engineering quality, delivery speed, and system scalability.

- **Designed and delivered the backend of the GoPilot driver-facing mobile app for road-mode tracking**, built within a single quarter for a strategic UAE client. Designed authentication middleware, geofencing logic, and core tracking flow; implemented list/detail views and API integrations. Broke down features, delegated tasks to junior developers, and tracked execution using Gantt charts for high-speed delivery.
- **Improved ETL pipeline performance by ~30%** in the transform layer, handling 30+ records/sec, each triggering 100+ model-level queries. Refactored pipeline to **eliminate N+1 patterns**, introduced **precomputed derived fields**, and implemented an observer-pattern-based data flow to **decouple transformations from transactional paths**.
- Drove scalability and observability improvements by introducing **SLA definitions and engineering triage dashboards via New Relic**. Optimized DB queries by reviewing **execution plans and restructuring indexes** to align with evolving query patterns and data scale, reducing **list page API response time (avg) from 3s to 800ms**.
- Reduced **first-response SLA from >24 hours to ~2 hours** and **mean resolution time from 2–3 days to <1 day** by automating client and operations issue assignment and escalation workflows via Slack, replacing manual Excel-based tracking.

### Software Development Engineer I

07/2021 – 03/2023 | Remote

GoComet India Pvt Ltd

Demonstrated **strong ownership** across the full development lifecycle for both **features and bug fixes**. Designed and delivered **scalable logistics and data-driven features** in a fast-paced environment. Maintained **high test coverage (90%)** across services, resulting in minimal production bugs and stable client-facing systems.

- **Built geofencing logic** using vessel AIS coordinates to trigger container arrival alerts. Developed a **detention and demurrage (D&D) cost computation module**, leveraging port dwell times and carrier-specific free time policies to estimate monetary overhead for delayed container pickup.
- **Automated container ingestion pipeline** by extracting container numbers from PDF attachments in emails using OCR (AWS Textract). Integrated **SFTP clients for batch data transfer and webhook-based triggers for real-time updates**, increasing the **product's integration capabilities by 50%**.
- **Bypassed sliding image captchas** from carrier websites using image processing techniques. Introduced **mouse movement emulation in Selenium / Ferrum** to simulate human interaction and **evade bot detection**.
- Maintained **Docker-based legacy services on client servers** for a key enterprise client.

## Software Development Intern

01/2021 – 06/2021 | Remote

GoComet India Pvt Ltd [↗](#)

- Introduced **categorization of carriers based on their performance and update frequency** for visibility on the client dashboard, reducing **client queries about data lag by 70%**.
- Integrated APIs of multiple global shipping lines, **increasing coverage by 300%** and 3rd-party logistics vendors, adding support for air tracking. Built normalization layers to standardize disparate tracking data into internal schemas.
- **Scripting done for the sampling process** for the data quality of data integrated with carrier and third-party vendors

## Machine Learning Engineer Intern

07/2020 – 08/2020 | Remote

Investwell [↗](#)

- Developed **an intelligent CAPTCHA breaker** to be used as a pre-filling tool in application forms. Applied
- Developed **a continuous learning module** for new incoming data and **fine-tuned the pre-trained model**

## SKILLS

---

**Languages:** Ruby, Python, JavaScript, C++, Java, MATLAB

**Frameworks:** Ruby on Rails, ReactJS, Django, Flask, NodeJS, OpenCV

**Databases:** PostgreSQL, MySQL, MongoDB, Elasticsearch

**Softwares/Tools:** Docker, GCP (Kubernetes, VMs, CloudSQL, Maps), Jenkins, AWS (SQS, SNS, SES, S3, EC2, Lambda), New Relic, Skylight, JIRA, Git, Postman

## EDUCATION

---

### Bachelor of Technology

07/2017 – 06/2021 | Jabalpur

Indian Institute of Information Technology, Design and Manufacturing,  
Jabalpur (CPI - 8.7)

## AWARDS

---

- Grabbed **Quarterly Shoutouts** for two consecutive quarters of Q2 and Q3 2024
- **Winner of the internal hackathon (Codeathon) in 2023** for introducing a data pipeline tool for internal analysis (MetaBase)
- **1st Runner-up of internal Hackathon (Codeathon) in 2024** for automating the sales demo dashboard, making it highly configurable based on feature use case
